CLIMATE NEUTRAL ECONOMY

You have the questions, we have the answers.

Where would our Green tech company grow the best?

- Germany: The German government has set a target of becoming climate neutral by 2045 and has invested heavily in renewable energy and infrastructure.
- India: The Indian government has also set ambitious targets for renewable energy and has a growing market for water technology.
- Brazil: The Brazilian government has made significant investments in water technology, particularly in the sanitation sector.

How will Germany’s energy transition affect our business?

- Germany is transitioning from carbon-based energy sources to renewables. This will create new opportunities for businesses in the energy sector.
- Germany has implemented a variety of policies to support the energy transition, including feed-in tariffs and energy savings certificates.
- Germany is one of the world’s largest consumers of energy, which means there is a significant market for renewable energy technologies.

How can we benefit from de-centralized power generation?

- De-centralized power generation allows for greater flexibility and reduces the need for large, centralized power plants.
- Smart meters can help consumers optimize energy production and consumption, reducing energy costs and improving energy efficiency.
- Virtual power plants can help small-scale energy producers pool resources and sell energy to the grid.

What does water technology need the most?

- Germany’s water technology sector needs sophisticated, efficient, and sustainable solutions for water management.
- This includes technologies for desalination, water recycling, and wastewater treatment.
- Germany is a leader in water technology, and there is strong government support for innovation in the sector.

What will happen when eco-friendly wears out?

- Germany has a strong recycling culture and a robust recycling infrastructure.
- The government has implemented policies to encourage recycling, including tax incentives and penalties for waste disposal.
- Germany has made significant investments in recycling infrastructure, which has helped to reduce waste disposal costs and increase recycling rates.

What is the future of waste management?

- Germany is a world leader in waste management, with a focus on recycling, reusing, and reducing waste.
- The government has set ambitious targets for waste reduction and recycling, including a goal of 58% recycling by 2022.
- Germany has made significant investments in recycling infrastructure, which has helped to reduce waste disposal costs and increase recycling rates.

More than €70 billion has been invested in the German recycling infrastructure since 1990. Join a market that had €17.2 billion in sales in 2018 and is expected to reach €40 billion by 2028.
